Assessment by Internal Examiner \* Indicates assessment by Internal Examiner, \*\*: Assessment by External and Internal Examiner, +: Presentation/Seminar assessment by External and Internal Examiner, #\*- For Non Credit course grades (A-D) to be mentioned in the mark sheet based on the continuous assessment.

(\*): Evaluation of industrial training and its reports will be done in 5th semester and the credits for same will be included in 5th semester mark sheet. The teaching load assigned to a faculty member for guiding students in preparation of training report and its evaluation for a batch of students (equivalent to practical batch size) would be 1 hour/week in 5th semester.

@: assessment by Internal Examiner

#### **Course Objectives:**

Quantity Surveying is core course of civil engineering programme. Civil engineer need to have some basic skills to interpret the drawing, to apply the methods of computing the quantities according to relevant I.S. In this applied technology course of Quantity surveying, efforts have been made to familiarize and to know the provision of I.S. for mode of measurement, specifications for various items of works, carrying out rate analysis and also the approximate methods of estimation. These basic skills can be developed in the students through this course.

#### **Course Outcomes:**

Student should be able to

| CO1 | Interpret the working drawing and find approximate cost of civil engineering structure. |
|-----|---|
| CO2 | Prepare check list of items of construction.  |
| CO3 | Evaluate estimate for civil engineering work.   |
| CO4 | Analyze rates of items of construction.   |
| CO5 | Take measurement of completed work.   |
| CO6 | Draw up the specification for various items of works                                    |
| CO7 | Valuate the building  |

### **Course Content:**

|    | Unit<br>&<br>Sub-<br>Unit | Topics/Sub-topics  | Hou | rs | Ma<br>rks | СО  | R<br>Level | U<br>Level | A   |
|----|---------------------------|--|-----|----|-----------|-----|------------|------------|-----|

<sup>@-</sup>Assessment by Internal Examiner.\* - Practical examination assessed by internal examiner.

### **Course Objectives:**

This subject is intended to teach the students concepts, principles & procedures in different treatment required for water supply and waste water disposal.

#### **Course Outcomes:**

After completion of the course the student will be able to

| CO1 | Estimate water demand.  |
|-----|---|
| CO2 | Analyze the working of water and waste water treatment plant.         |
| CO3 | Interpret quality of water and waste water by conducting tests on it. |
| CO4 | Design sewers, septic tanks.  |
| CO5 | Manage water supply & its distribution.                               |
| CO6 | Compare sewage disposal methods.                                      |

### **Course Content:**

<sup>@:</sup> assessment by Internal Examiner

#### **Course Objectives:**

Students will be able to

- Understand & determine physical properties of the soil.
- Solve problems to determine properties of soil required for foundation design.
- Design simple foundations.

#### **Course Outcomes:**

Student should be able to

| CO1 | Identify and classify types of soil based on their index and Physical properties.   |
|-----|---|
| CO2 | Determine the Permeability, compaction, shear strength of soil by Terzaghi's theory and its application and failure theories and its effect on foundation |
| CO3 | Elaborate sub surface explorations and Geo-Textiles   |
| CO4 | Determine dry field intensity by different methods.   |
| CO5 | Determine bearing capacity of soil and knowing different types of foundation.   |

#### **Syllabus**

#### Course Objectives:

Civil engineering essentially means dealing with structures in various ways, either as designer or contractor in maintenance field. Reinforced Cement Concrete is one of the most widely used materials of construction and this syllabus deals with basic properties of this composite material and principles on which various components of the structures are designed using this composite material. The syllabus deals with analysis and design of basic structure components which form part of most of the structures to give feel of design of basic to complex structures.

Course Outcomes: Student should be able to

| CO1 | Enlist materials for RCC design with various types of permissible stresses for the same. |
|-----|--|
| CO2 | Calculate load or moment carrying capacity of various components of a simple building.   |
| CO3 | Design various components of a simple building   |
| CO4 | Draw reinforcement detailing sketches for various components of a simple building        |

#### Term Work:

1. Project in design and drawing of a small building covering slabs, beams, columns and footing including bar bending schedule.

Students shall submit minimum of two half imperial drawing sheets based on above designs.

<sup>\*\*:</sup> assessment by External and Internal Examiner, @: assessment by Internal Examiner

#### **Course Objectives:**

The purpose of this course is to introduce the concepts of design and analysis of flexible and rigid pavements. The students will gain experience with classic pavement analysis techniques.

#### **Course Outcomes:**

Student should be able to

| Identify the pavement components and compare highway and airport pavements   |
|--|
| Compute the stresses and ESWL in flexible pavements                          |
| Design the flexible pavements using empirical, semi-empirical and IRC method |
| Calculate the warping, friction and wheel load stresses                      |
| Design the rigid pavements by IRC method                                     |
|  |

<sup>\*\* -</sup> Assessment by Internal & External Examiner. @- Assessment by Internal Examiner.

#### **Course Objectives:**

It spells out the need for better disaster management which may help to bring relief immediately to the victims of the tragedy. Students will understand and appreciate the nature of disaster management, in its pre-disaster, during disaster and post disaster phases.

#### **Course Outcomes:**

After completion of the course the student will be able to

| CO1 | Classify different types of disaster |  |
|-----|--------------------------------------|--|
| CO2 | Calculate disaster impact            |  |
| CO3 | Plan disaster risk mitigation        |  |

#### **Course Content:**

|                        |     | SECTION-I  |    |           |   |           |                |           |

<sup>\*\*:</sup> Assessment by External and Internal Examiner, @- Assessment by Internal Examiner.

#### Objective:

The aim of the subject is to present the science and practice of irrigation engineering in a concise form comprising practically all the modern development. The input to the subject is the knowledge of survey for investigation, hydrology for calculation of yield from rainfall records for designing the storage, conveyance and outlet structures and determination of ground water flows.

#### **Course Outcomes:**

After completion of the course the student will be able to

| CO 1  | Measure and analyze rainfall, runoff and water losses |
|-------|---|
| CO 2  | Construct and analyze different hydrographs           |
| CO 3  | Use stream gauging techniques                         |
| -CO 4 | Determine ground water flow                           |
| CO 5  | Calculate runoff and yield from catchments.           |

Content: Theory.

# **Course Objectives:**

As by this semester, students have undergone courses in Mechanics of Structures and Theory Of Structures, it is time to give more knowledge of the analysis of structures to the students who have a flair for analysis and design of structures. This subject provides knowledge of analysis of few more determinate structures and deflection of beams by some more methods apart from teaching some important theorems useful in study of Structural Engineering.

Course Outcomes: Student should be able to

| CO1 | State and explain various theorems useful in analysis and design of Structures |
|-----|--|
| CO2 | Calculate deflections in beams using few more methods.                         |
| CO3 | Analyze few more types of structures with different methods.                   |

<sup>\*\*-</sup> Assessment by Internal & External Examiner @- Assessment by Internal Examiner.

# **Course Objectives:**

This course is intended to teach the students to develop following competency: Plan segregation, collection, transportation, recycling and disposal of municipal solid waste in such a way that its impact on environment, economy and community is minimal.

#### **Course Outcomes:**

After completion of the course the students will be able to

| CO1 | Explain municipal solid waste management systems with respect to its physical and associated considerations in view of emerging technologies. |
|-----|---|
| CO2 | Outline sources, types and composition of solid waste with methods of handling, sampling and storage of solid waste.                          |
| CO3 | Select the appropriate method for solid waste collection, transportation, redistribution and disposal.  |
| CO4 | Describe methods of disposal of hazardous solid waste.  |
| CO5 | Explain different solid wastes processing methods   |
| CO6 | Conclude the recent trends in reuse of solid waste.   |

### **Course Content:**

**Notes:** This specification table shall be treated as a general guideline and actual distribution of marks may slightly vary from table. But the questions from each topic should be asked as per marks weightage. Numerical questions are to be asked only if specified.

# List of Practicals/Assignments/Tutorials:

| Sr.<br>No. | Unit | Assignments  | Approx.<br>Hours | СО          |
|------------|------|--|------------------|-------------|
| 1*         | 1    | Survey the MSW of your locality and Identify its sources and write composition of MSW.   | 4                | 2           |
| 2*         | 2    | Carryout sample survey of different localities in groups listing properties of municipal solid waste.  | 4                | 2           |
| 3*         | 3    | Survey your locality and based on it suggest methods of solid waste collection.  | 2                | 2           |
| 4*         | 4    | Survey your locality and based on it suggest suitable methods of handling, separation and storage of solid waste.  | 4                | 3           |
| 5*         | 5    | Identify and discuss the methods of processing different types of solid waste  | 2                | 4           |
| 6*         | 6    | Compare different methods of disposal of MSW.  | 4                | 3           |
| 7          | 7    | Identify methods of hazardous waste disposal during site visit and follow safety precautions.  | 2                | 3           |
| 8*         | 8    | Write a report on visit to Mechanical process of composting plant nearby to your place.  | 4                | 1,2,3,4,5,6 |
| 9          | 9    | Identify the different types of biomedical waste generated in hospital and then visit nearby Incineration plant.   | 2                | 6           |
| 10*        | 10   | Mini Projects: students will work in group on following:  1. Explore internet for studying latest methods of handling, collecting, segregating, recycling and disposing MSW and prepare reports. | 4                | 1,2,3,4,5,6 |

Minimum 8 and maximum 10 practicals/experiment/Tutorials sessions to be included in a course term work in a term.

Note: \* - Mandatory Assignment/Tutorial/Practical

<sup>\*:</sup> assessment by Internal Examiner, @: assessment by Internal Examiner

#### **Course Objectives:**

The students passing this course should have concept to solve a specific problem from its identification and literature review till the successful solution of the same. Accordingly suitable projects will be taken by the students to study the complete aspects of a project. The project activities will provide students the exposure to handle real world life problems and their solutions.

#### **Course Outcomes:**

Student should be able to

| CO1 | Work in a team to identify a problem for project work   |  |  |  |  |
|-----|---|--|--|--|--|
| CO2 | Review and evaluate the available literature on the identified problem                                    |  |  |  |  |
| CO3 | Formulate the methodology to solve the identified problem   |  |  |  |  |
| CO4 | Develop presentation skill  |  |  |  |  |
| CO5 | Develop a range of leadership skills and abilities such as effectively leading change, resolving conflict |  |  |  |  |

#### **Course Content:**

The students in a group of 4 to 5 work on a topic related to civil engineering, approved by the head of the department under the guidance of a faculty member. It is mandatory to present and submit preliminary report based on work done in current semester. The report shall contain finalization of topic, literature survey, objectives and methodology of work. The project shall be typed or printed in spiral bound.

<sup>\*\*:</sup> assessment by External and Internal Examiner, @: assessment by Internal Examiner

## **Course Objectives:**

Students to learn facts, concepts, principles and procedure followed in the preparation of tender documents, contracts and maintaining the accounts before start of any new project. Students will also get acquainted with procedures and different forms used by PWD as well as private construction firms and will therefore be able to prepare bills and pay contractor for the work as well as penalize for defective work

#### **Course Outcomes:**

Student should be able to

| COI | Distinguish between different types of contracts              |
|-----|---|
| CO2 | Prepare tender document for civil engineering works           |
| CO3 | State procedure of submitting and opening of tender documents |
| CO4 | State PWD and Private Ltd. Organization account procedure     |

## - For Non credit course grades A-D to be mentioned in the mark-sheet based on the Continuous Assessment.

## Course Objectives:

Technical education forms the backbone of development of any nation. The journey of cooperation between Industry and Institute has taken different forms at different times. Historically it started with simple interaction and gradually evolved to very close partnership overtime. India has one of the largest technical manpower in the world. But compared to its population, it is not significant and there is a tremendous scope of improvement in this area. Bridging the skill gap is the need of the day and decides the national development and economic growth.

It spells out the need for better interaction between educational institutes and industries which may help to bring in the students understanding the course content in a better way. Students will understand the engineering in a better way.

#### **Course Outcomes:**

After completion of the course the student / faculty will be able to

| CO1 | Participate in national / state level technical paper, project & quiz competition.  |
|-----|---|
| CO2 | Enhance Industry Institution Interaction.   |
| CO3 | Learn the state of the global technology and process to add to their core technological foundation by industry expert lectures. |
| CO4 | Keep them abreast of the scenario prevailing in their field of study.   |

**Course Content:** 

Sem V, DCE, VJTI

| Unit &<br>Sub-<br>Unit | Topics/Sub-topics   | Hou<br>rs | Mark<br>s | C<br>O          | R<br>Leve    | U<br>Leve<br>1 | A<br>Leve |
|------------------------|---|-----------|-----------|-----------------|--------------|----------------|-----------|
| The state of           |   |           |           |                 | Theory Marks |                |           |
| 1                      | Industry Liaison: Preparing / updating a comprehensive directory of technology experts in different fields of expertise and know-how and forging continuing links with them through various means of involvement like  talks,  guest lectures,  research collaboration,  students project guidance,  seminars,  videos of various technical projects etc. | 20        |           | 1,2<br>,3,<br>4 | 40           | 40             | 20        |
| 2                      | Industrial Visits /Technical Exhibitions: Encourage the students to visit  • wide range of industries • technical exhibitions, to keep them abreast of the scenario prevailing in their field of study.   | 12        |           | 1,2<br>,3,<br>4 | 40           | 40             | 20        |

**Legends:** R- Remember, U – Understand, A – Apply and above levels (Blooms' Revised Taxonomy).

**Legends:** R = Remember; U = Understand; A = Apply and above levels (Bloom's revised taxonomy)

**Notes:** This specification table shall be treated as a general guideline and actual distribution of marks may slightly vary from table. But the questions from each topic should be asked as per marks weightage. Numerical questions are to be asked only if specified.

# List of Practicals/Assignments/Tutorials:

| Sr.<br>No. | Unit | Assignments   | Approx.<br>Hours | СО      |
|------------|------|---|------------------|---------|
| 1.         | 1    | Industry Liaison: Students will prepare the report of the activity in a group of 8-10 students.                         | 20               | 1,2,3,4 |
| 2.         | 2    | Industrial Visits /Technical Exhibitions: Students will prepare the report of the activity in a group of 8-10 students. | 12               | 1,2,3,4 |
|            |      | Students will submit report of 1&2 mentioned above as a Term Work.  |                  | _       |
